

Reliable

Reliable content measurement of alumina

Cost effective Maintenance-free operation

User friendly Simple mounting and setup

Alumina powder silo

Level measurement and point level detection in alumina powder silos

The alumina powder is kept ready in storage and day silos for subsequent smelting. Aluminium smelting is carried out in the fused salt electrolysis process, where pure liquid aluminium is extracted from aluminium oxide. Optimal storage is ensured by level measurement and point level detection.

More details

VEGAPULS 6X

Non-contact level measurement with radar in storage silos

- Reliable measurement, unaffected by dust
- Easy sensor alignment via aiming flange and alignment app for smartphone
- Maintenance-free operation thanks to encapsulated antenna system

Show Product

VEGAWAVE 62

Vibrating level switch as overfill protection in storage silos

- Reliable function through product-independent switching point
- Immune to buildup
- Simple setup without adjustment
