Optimal utilization of the container volume

User friendly

Simple installation and setup

Storage tanks for chemicals and auxiliary substances

Level, switching and pressure measurement in storage tanks

The targeted addition of chemicals and auxiliary substances influences the properties and quality of the paper. Common additives are hydrogen peroxide as well as alkalis, acids and fillers. These chemicals and additives are sometimes aggressive, produce vapours and are at temperatures of up to 95 °C. This means they are often stored in stainless steel or glass fibre reinforced plastic containers. Level and pressure measurements are essential for the safe filling and emptying of the storage tanks and for dry run protection of pumps.

More details

VEGAPULS 6X

Non-contact level measurement with radar in storage tanks

- Wear and maintenance-free through non-contact measurement
- Suitable for all media and container types
- High chemical resistance via PTFE-encapsulated antenna system

Show Product

VEGABAR 39

Pressure measurement as dry run protection for the chemical pumps

- Chemically resistant diaphragm
- · Small, front-flush process fitting
- Adjustable switch points for signalling exceeding/falling pressure limits
- Signalling of switch and sensor status using full-colour LED-illuminated ring

Show Product

VEGASWING 63

Vibrating level switch as overfill protection in the storage tank

- Overfilling of the container is reliably prevented
- WHG-approved instrument ensures legal certainty
- Simple WHG (function) test via keystroke
