

Reliable

Reliable continuous measurement, even during filling

Cost effective

Optimal container volume utilization

User friendly

Volume display and sensor adjustment in a convenient location

Wood chip silo

Wood chip silo level measurement

The wood chips are transferred via conveyor belts to storage silos up to 25 m high and stored there temporarily for further processing. The silos are filled and emptied in batches. During the process, large amounts of dust are generated, material cones and bridges form, which collapse during emptying. Reliable level measurement is needed here to ensure supplies for downstream processes and facilitate logistics planning.

More details

VEGAPULS 6X

Level measurement with radar in the wood chip silo

- Reliable function despite heavy dust from dry wood chips
- Precise alignment with the angle of repose by means of swivelling holder
- · With a tightly focused measurement signal, it is unaffected by vessel internals

Show Product

VEGADIS 81

Measured value display and sensor adjustment

- Measured value display and sensor adjustment in a readily accessible location
- Easy-to-read display with plain text and graphics
- Simple operation via four keys and clearly structured menu
